

TRUCK WATER METER

MEASURE MIX WATER EXACTLY

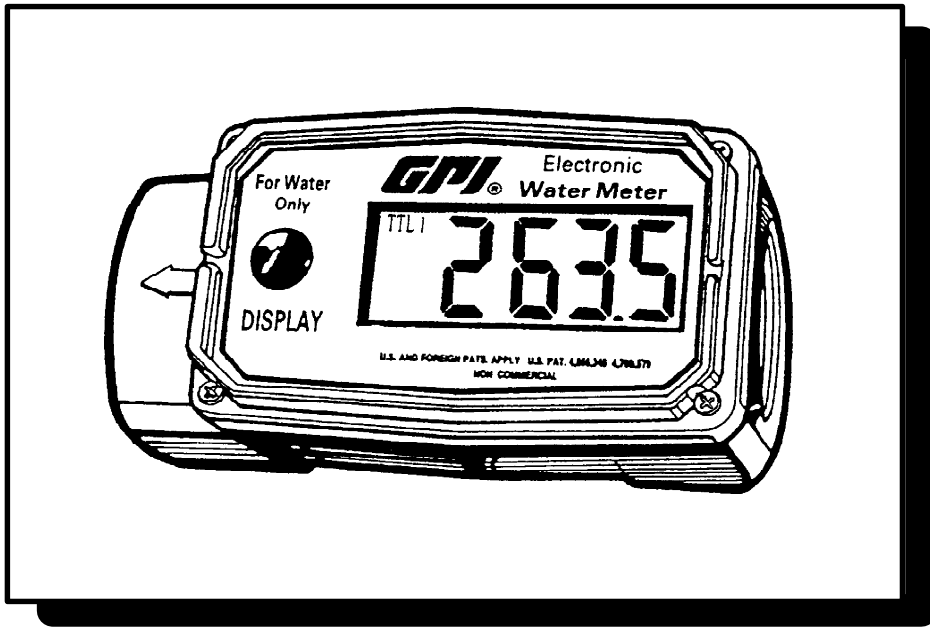

This battery operated water meter is a must for the drivers who are responsible to add various amounts of water to a mix on the job site. No longer must one guess or try to read a bouncing site guage. The water meter has a dual register display so one can reset to zero in order to batch exact amounts of water and also keep a running total. A sleep function saves the batteries until the display button is pushed or water moves through the meter. Uses AAA batteries (included) which last about a year.

Other models available include GPM flow rate meters and remote reading kits.
